**01**

SRI (Solar Reflective Index) measure a roof's ability to reject solar heat (reflectance) and the ability to emit heat out (emittances).

**04**

The U.S green building councils LEED 2.2 user SRI as a way to evaluate a eco white. To get LEED accreditation, building should use a roof with minimum SRI value of 78.

**02**

Eco white reflects and emit the sun heat instead of absorbing it.

**05**

Eco white tile on the roof of a building can reduce inside building temperature by low degree centigrade.

**03**

Eco white is one that reflects the sun's heat and emits absorbed radiation back in to the atmosphere. This will keep the inside building cooler.
