

NITCO

TILES MARBLE MOSAICO

Artisanal Collection

PORCELAIN MOSAICO

Introduction

Welcome to the future of exquisite design and unparalleled sophistication. Nitco, a name synonymous with innovation and elegance in the world of tiles and surfaces, proudly presents its latest marvel: Press Porcelain Mosaics.

The Press Porcelain Mosaics range captures the essence of opulence and ingenuity, crafted to adorn spaces with unparalleled splendor.

As you leaf through the pages of this catalogue, you'll embark on a visual journey that showcases the fusion of traditional mosaic art with cutting-edge technology, resulting in a symphony of patterns, textures, and colors that captivate the senses.

Frizzle Effect

Frizzle brings a premium Crackle effect to the surface

These are special tiles made for swimming pool to give it a shimmery effect, which also has zero porosity that leads to no fungus and scaling. The cracks are part of the design and enhance the look of the pool. They are made by applying reactive glazes to the tile surface.

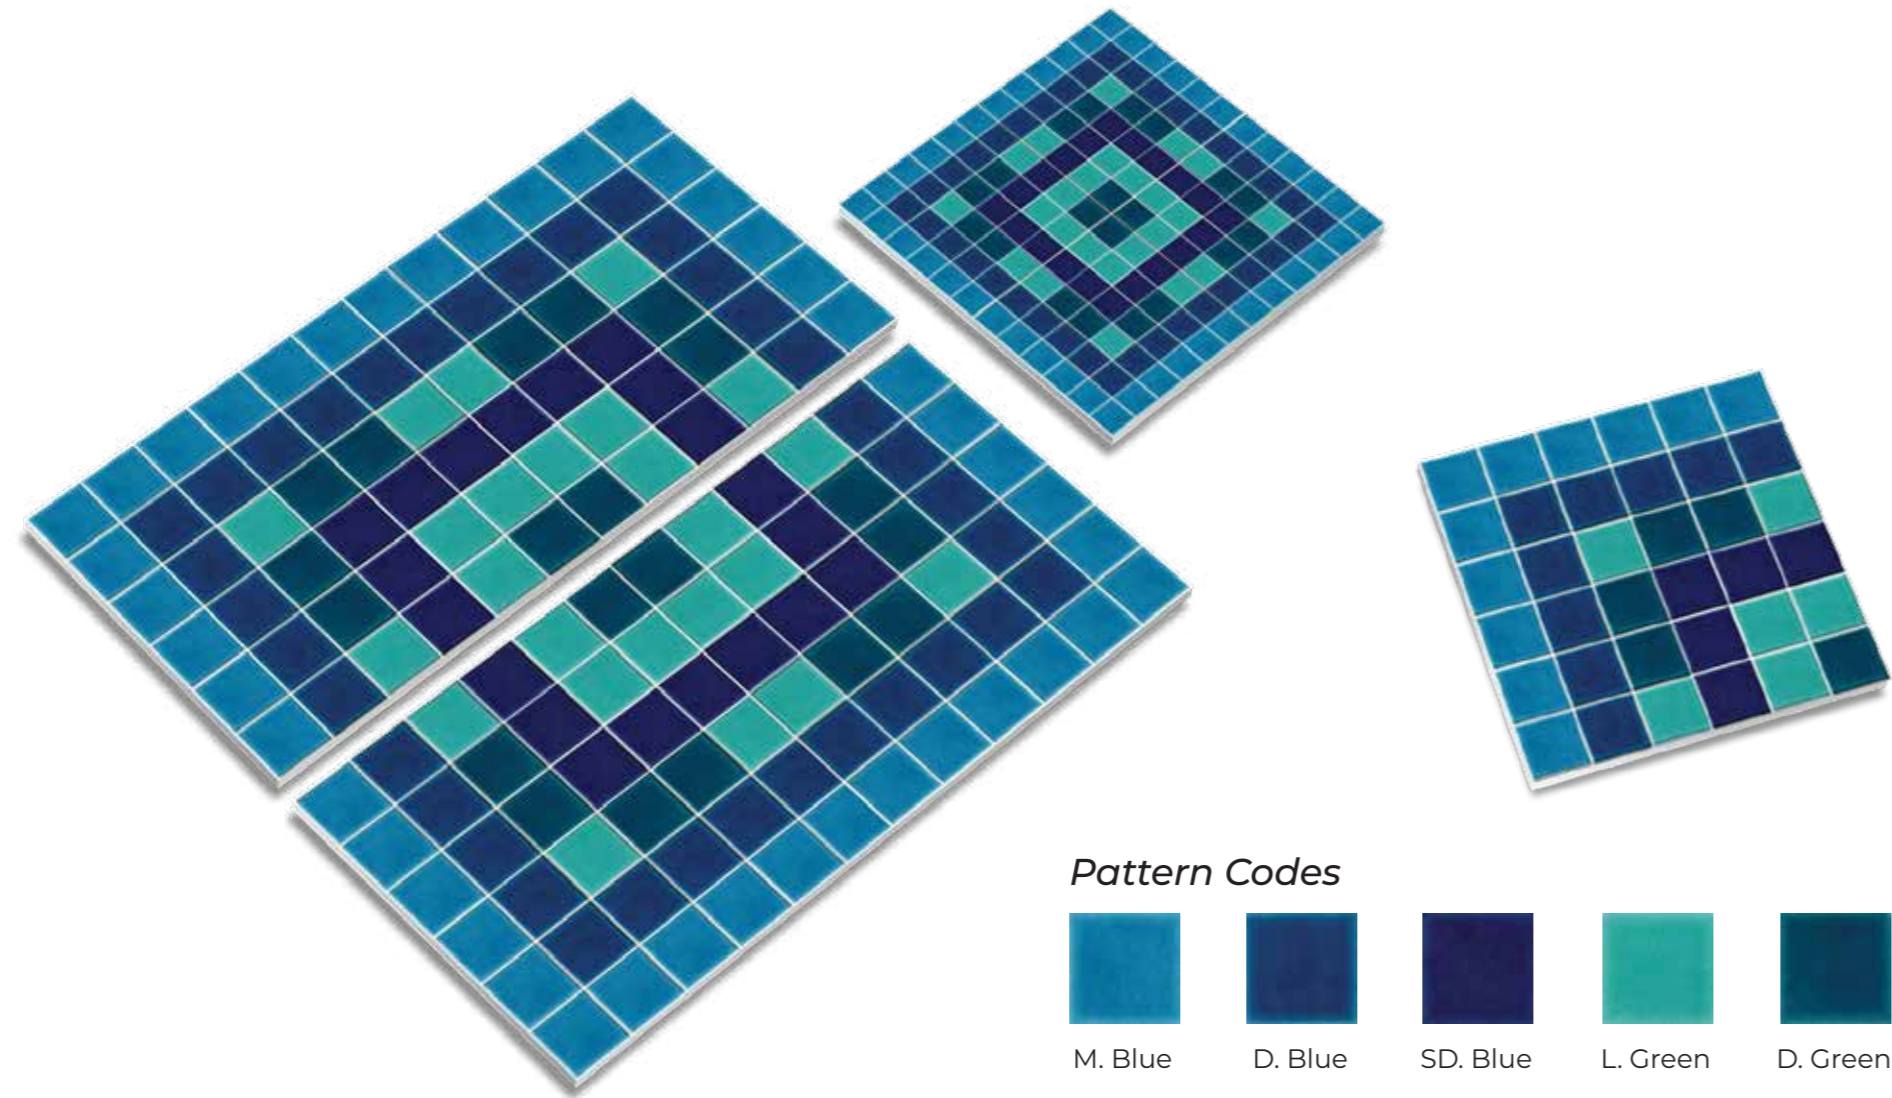

The most prominent benefit of using our frizzle effect tiles in the swimming pool is their durability and low maintenance requirements. The glaze on these tiles protects them from fading over time due to sunlight exposure and chemical effects like chlorine or salt water. Additionally, cracks are less likely to form on these tiles since they have an extra layer of glazing from the manufacturing process which helps reduce wear and tear over time.

Frizzle Exclusive

Being the pioneers for surface innovations we at NITCO have created unique mosaic patterns to make your pool look one of a kind.

Mosaic Installation Process

1. Skimming

- ◆ The installation surface must be smooth and clean to ensure proper installation.
- ◆ It may be necessary to lay a thin layer of setting material on the surface to ensure that it is ready for the tile.
- ◆ Allow 12 hours to dry if layer of setting material is needed.

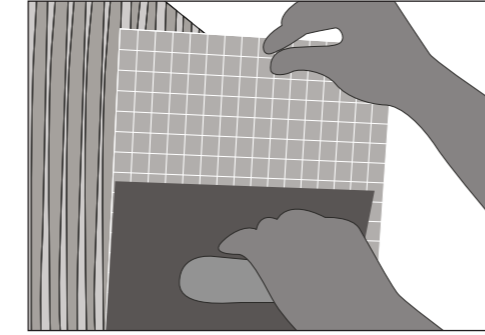

2. Guide Lines

- ◆ Measure the space in which the mosaic is being installed to determine the best fit for your tile.
- ◆ Use a straight edge and level to help you align the tile as you work.

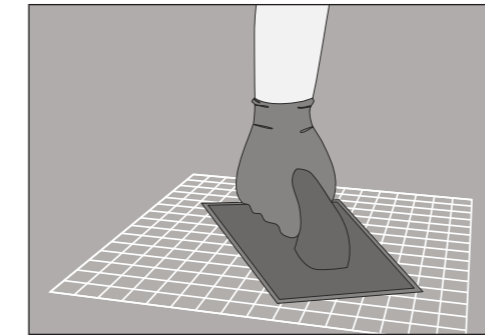

3. Applying Setting Material

- ◆ Mix setting material.
- ◆ First coat: apply setting material with the smooth edge of a trowel to a section no larger than one section of the grid.
- ◆ Second coat: create even ridges in the setting material by “combing” the material with the notched edge of the trowel.

4. Installing the Tile

- ◆ Apply the backside of each sheet with the setting material.
- ◆ Using a float tool, tap across the surface to adhere the mosaic securely into the setting material.

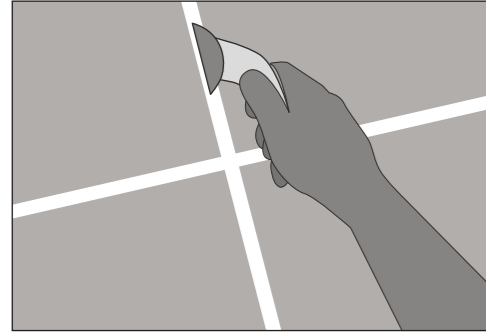

5. Securing Mosaic Sheets

- ◆ It is important to create a secure bond between the tiles and the setting material.
- ◆ Using the float tool tap across the surface to adhere the mosaic securely.
- ◆ This also ensures the final exposed plane of the mosaic is consistent and uniform in height.

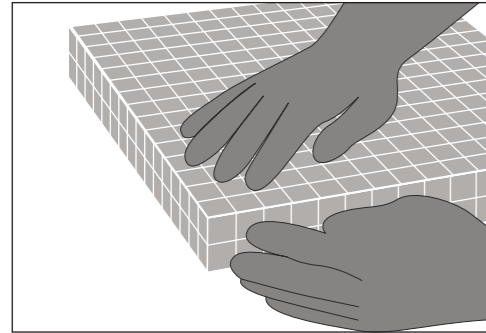

6. Adjusting Spacing

- ◆ This can be a time consuming process, but is important to ensure a professional installation.
- ◆ Adjust while material is still wet.
- ◆ Adjust any tiles that are uneven and ensure that all gaps are of equal width and height. Do this by cutting through the clear tape and moving tiles with a small trowel.

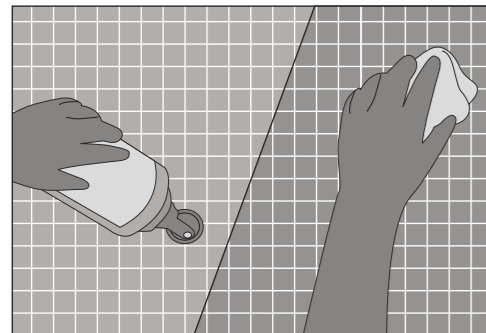

7. Grouting

- ◆ Grout can be applied to a clean, dry surface. (See Step 8 “Expansion Joints”)
- ◆ Before applying grout be sure that the mosaic surface is clean.
- ◆ Thorough cleaning may involve removing excess setting material from the mosaic’s joint with a knife, as well as cleaning off all dust and particles.
- ◆ Spread grout from the bottom up in a diagonal direction using a small trowel.
- ◆ Squeegee in the opposite direction.

8. Expansion Joints

- ◆ Expansion joints should be installed at all “changes in plane” of the mosaic and where the mosaic meets an adjoining surface, such as in a corner.

9. Cleaning & Sealing

- ◆ The mosaic should be ready to be cleaned about 30-60 minutes after grouting.
- ◆ Use a sponge and clean water and scrub in a circular motion, removing excess grout and smoothing all joints. Continue to wipe down the tiles until clean.
- ◆ Seal the grout after 72 hours of application.

NITCO

Technical Specifications Glazed Press Porcelain Mosaic (per pixel)

Sr.No.	Test Description	Euro Standard	NITCO's Value
1	Dimension & Surface Quality	+ 0.5%	+ 0.2%
2	Deviation in Thickness	± 0.6%	+ 0.2%

4	Rectangularity	+ 0.5%	+ 0.3%
5	Sace flatnessurf	Min.95%	Min.96%
6	Water Absorption	< 0.5 %	+ 0.35%
7	Bend Strength	> 150 Kg/cm	> 200-250 Kg/cm
8	Scratch Hardness (Moh’s)	Min.3%	Min.3%
10	Staining Resistance	Min.. Class 2	Class 5
11	Household Chemical	Min.. Class B	Household Chemical Except Hydro Fluoric Acid & its Derivatives
12	Thermal Shock	Resistant to 10 Cycle	Resistant
13	Thermal Expansion	Max. -9E ⁰⁶	<9 x 10 ⁶

The reproduction of tiles in this catalogue is restricted to four colour printing only and tiles are not relative in sizes. Conforming to ISO requirements, technical specifications of NITCO tiles are applicable only for first grade / first quality tiles. Please inspect all tiles prior to installation. Company will not entertain complaints once tiles are laid / fixed. Price category & PEI grade may change without any notice. Customers are advised to confirm it before placing order.
